NFT PROJECT

HABIBIGANG

about project

Our project aims to create an attractive and unique NFT collection with distinct features. The contract manages Premium and Normal users, setting minting limits for each category. Phases control minting availability, and reserved limits ensure fairness. The contract allows updates to limits, metadata, and deactivation of transfers. Admins can mint in bulk, and NFTs can be fetched by address. We'll list our NFTs on OpenSea testnet, offering a captivating collection for art enthusiasts and collectors.
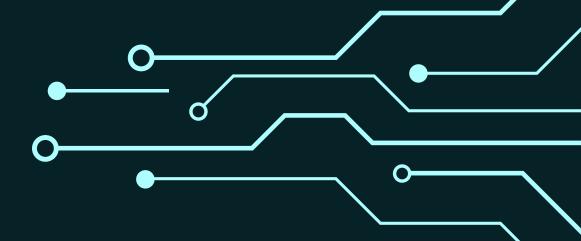

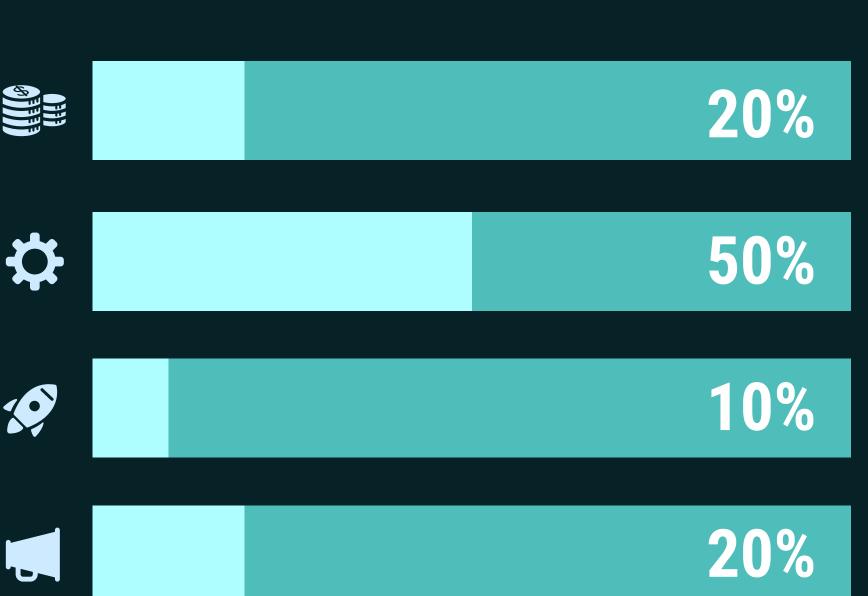

Project Concepts

The contract follows a phase-wise minting approach, where the owner creates phases, sets reserved limits for each phase, and defines the limits for Premium and Normal users per address. The reserved limit ensures that neither Premium nor Normal users can exceed a specified number of NFTs minted during a phase. Additionally, the contract prevents minting if the limit for each address is reached, and the reserved limit cannot exceed the user's minting limit.
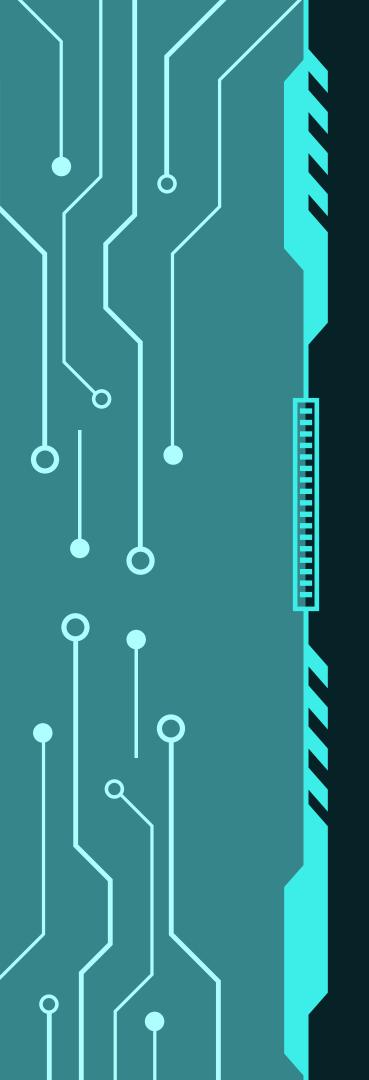

- Activation of a phase is crucial for minting NFTs
- there is a bulk mint function available for users to mint NFTs in bundle
- oth Premium and Normal users have specific minting functions
- the admin has the capability to mint NFTs in bulk.
